

ABSTRACT OF DISCLOSURE

An optical disk for a mobile device is provided. The optical disk includes a substrate, having an outer diameter less than 120 mm and not smaller than 30mm and a thickness less than 1.1mm and not smaller than 0.40mm, so that a deflection angle of 0.7° or smaller can be obtained. Alternatively, the optical disk includes a substrate, having an outer diameter not smaller than 30mm and a thickness not smaller than 0.435mm, so that a deflection angle of 0.6° or smaller is obtained.
